

Koordinationsstelle für
Veterinär-klinische Studien

ko **VET**

Coordination Staff for
Veterinary Clinical Studies

Modern clinical studies are characterized by an increased complexity of their interrogations and high requests on planning, scheduling, monitoring and documentation. All these parameters got to meet the requirements of international standards. Due to the difficulties arising from the prementioned terms it might be problematically to find corresponding partners carrying out projects auspiciously and coordinating all necessary activities, especially when various parts of the project have to be conducted at different places.

The faculty for veterinary medicine (**VMF**) of the university of Leipzig has a long tradition in clinical research and can look back on a long line of successful cooperations between its different clinics and institutes on the one hand and the pharmaceutical industry on the other hand. The facilities of the **VMF** with their expertise will be reliable partners for scientific well-founded planning and realization of clinical studies in future.

With foundation of **ko VET** the **VMF** established a new innovative facility which is supposed to cross-link the clinics' and institutes' various **activities** and **expertises** in research and direct services. Moreover koVET shall act as **interface between the university and the pharmaceutical industry** and increase the bidirectional information flow and cooperations.

ko VET lends itself to **arrangements of clinical studies** as a **competent point of contact** for potential customers. It initiates and boosts **communication** between economical and on-campus partners and **ko VET** counsels and supports on demand **all phases of a project** (developing of protocols, coordination, staff-training, documentation, quality assurance and control). This will strengthen the basis for **flexible and related to need planning and realization** of clinical studies at the **VMF**.

Advantages for customers:

- *Projects from planning to evaluation made in one casting*
- *Competent partners with international scientific reputation*
- *Expertise in all branches of veterinary sciences*
- *Trained staff (GCP)*
- *Extensive and flexible infrastructure from molecular biological laboratory to large animal stables*
- *Direct access to patients/cases/companies for field study purposes*
